# Ignore Files 忽略文件

Control which files Cursor's AI features and indexing can access using `.cursorignore` and `.cursorindexingignore`

使用 `.cursorignore` 和 `.cursorindexingignore` 控制 Cursor 的 AI 功能和索引可以存取哪些文件

## Overview 概述

Cursor reads and indexes your project's codebase to power its features. You can control which directories and files Cursor can access by adding a `.cursorignore` file to your root directory.

Cursor 讀取並索引您的專案程式碼庫以支援其功能。您可以透過在根目錄中新增 `.cursorignore` 檔案來控制 Cursor 可以存取哪些目錄和檔案。

Cursor makes its best effort to block access to files listed in `.cursorignore` from:

Cursor 會盡最大努力阻止以下人員存取 `.cursorignore` 中列出的文件：

Codebase indexing 程式碼庫索引

Code accessible by **Tab**, **Chat**, and **⌘K**

可透過 **Tab**、**Chat** 和 **⌘K** 存取代碼

Code accessible via **@ symbol references**

可透過 **@符號引用** 存取的代碼

⚠ Tool calls initiated by Cursor's Chat feature to services like Terminal and MCP servers are not currently able to block access to code governed by `.cursorignore`

Cursor 聊天功能向終端機和 MCP 伺服器等服务發起的工具呼叫目前無法阻止存取受 `.cursorignore` 控制的程式碼
